The test is a standardized assessment of undergraduate physics written by ETS (Educational Testing Service). The ETS website contains a description of the exam and sample problems: http://www.ets.org/mft/about/content/physics. Results of the exam do not appear on the transcript or affect the GPA. Students should contact the Physics undergraduate secretary to make arrangements for taking the exam; typically it's done in the Testing Center before mid-semester.</p> <p>Note 1: Students planning careers in experimental, applied, or industrial physics should complete Stat 201.</p> <p>Note 2: All students will benefit, through courses or individual study, by learning programming skills and numerical methods beyond what you are taught in C S 142 and our computational physics courses. Consider the following: CS courses, Math 410, Me En 373.</p>	MATH 302 - Mathematics for Engineering 1	4.0	MATH 303 - Mathematics for Engineering 2	4.0	MATH 313 - (Not currently offered)		MATH 314 - Calculus of Several Variables	3.0	MATH 334 - Ordinary Differential Equations	3.0	MATH 213 - Elementary Linear Algebra	2.0	MATH 215 - Computational Linear Algebra	1.0	MATH 314 - Calculus of Several Variables	3.0	MATH 334 - Ordinary Differential Equations	3.0	PHSCS 492R - Capstone Project in Applied Physics	2.0v	<i>You may take up to 2 credit hours.</i>		PHSCS 498R - Senior Thesis	2.0v	<i>You may take up to 2 credit hours.</i>		<p>CAREER OPPORTUNITIES:</p> <p>A degree in physics or physics-astronomy can provide: 1. Preparation for those who intend to enter industrial or governmental service as physicists or astronomers. 2. Education for those who intend to pursue graduate work in physics or astronomy. 3. Education in the subject matter of physics for prospective teachers of the physical sciences. 4. Undergraduate education for those who will pursue graduate work in the professions: business (e.g., an MBA), law, medicine, etc. 5. Fundamental background for other physical sciences and engineering, in preparation for graduate study in these fields. 6. Physics fundamentals required by the biological science, medical, dental, nursing, and related programs. For more information, see www.physics.byu.edu/undergraduate/careers.</p> <p>THE DISCIPLINE:</p> <p>Over the centuries physicists and astronomers have studied the fundamental principles that govern the structure and dynamics of matter and energy in the physical world, from subatomic particles to the cosmos. Physicists also apply this understanding to the development of new technologies. For example, physicists invented the first lasers and semiconductor electronic devices. Physics and astronomy students learn to approach complex problems in science and technology from a broad background in mechanics, electricity and magnetism, statistical and thermal physics, quantum mechanics, relativity, and optics. The tools students develop at BYU include problem solving by mathematical and computational modeling, as well as experimental discovery and analysis. All students gain professional experience in a research, capstone, or internship project, usually in close association with faculty. Together these experiences can provide excellent preparation for employment or for graduate studies in physics, other sciences, engineering, medicine, law, or business. Most physicists and astronomers work in research and development in industrial, government, or university labs to solve new problems in technology and science. They also share the beauty discovered in our physical universe by teaching in high schools, colleges, and universities.</p>
